

# Mid-Cumberland Public Health Region, 2022

108 persons were newly diagnosed with HIV

16%

received a late diagnosis

→ Persons diagnosed with HIV Stage 3 (AIDS) within 12 months of a new HIV diagnosis are considered a **late diagnosis**, indicating delayed awareness of HIV status and missed opportunities for prevention efforts.

## Most affected subpopulations by number of persons newly diagnosed with HIV

Non-Hispanic black men, MMS	30
Non-Hispanic white men, MMS	29
Hispanic men, MMS	9
Non-Hispanic black men, HET	9
Non-Hispanic black women, HET	6
Men of all other races, MMS	6
Non-Hispanic black transgender persons	3

MMS: male-to-male sexual contact; HET: heterosexual contact

75%

were linked to HIV care within 30 days of diagnosis

95%

were linked within 365 days

2,332 persons were living with diagnosed HIV

72%

were virally suppressed

→ When HIV medication reduces the amount of HIV virus in a person's body to a low enough level (<200 c/mL), they are considered **virally suppressed** and will not transmit HIV through sexual contact.
