

Nashville Ryan White Transitional Grant Area, 2022

205 persons were newly diagnosed with HIV

19%

received a late diagnosis

→ Persons diagnosed with HIV Stage 3 (AIDS) within 12 months of a new HIV diagnosis are considered a **late diagnosis**, indicating delayed awareness of HIV status and missed opportunities for prevention efforts.

Most affected subpopulations by number of persons newly diagnosed with HIV

Non-Hispanic black men, MMS	56
Non-Hispanic white men, MMS	39
Hispanic men, MMS	25
Non-Hispanic black men, HET	13
Non-Hispanic black women, HET	13
Men of all other races, MMS	9
Non-Hispanic black transgender persons	7

MMS: male-to-male sexual contact; HET: heterosexual contact

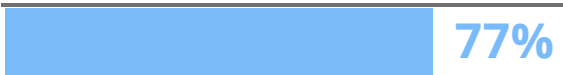

80%

were linked to HIV care within 30 days of diagnosis

96%

were linked within 365 days

6,264 persons were living with diagnosed HIV

received any HIV medical care
→ One lab result reported to TDH

were retained in HIV medical care
→ Two or more lab results, at least 90 days apart, reported to TDH

69%

were virally suppressed

→ When HIV medication reduces the amount of HIV virus in a person's body to a low enough level (<200 c/mL), they are considered **virally suppressed** and will not transmit HIV through sexual contact.
