

Southeast Tennessee HIV Community Planning Region, 2022

65 persons were newly diagnosed with HIV

25%

received a late
diagnosis

→ Persons diagnosed with HIV Stage 3 (AIDS) within 12 months of a new HIV diagnosis are considered a **late diagnosis**, indicating delayed awareness of HIV status and missed opportunities for prevention efforts.

Most affected subpopulations by number of persons newly diagnosed with HIV

Non-Hispanic black men, MMS	13
Non-Hispanic white men, MMS	9
Non-Hispanic black men, HET	7
Non-Hispanic white men, MMS+IDU	6
Hispanic men, MMS	5
Non-Hispanic white women, IDU	4
Non-Hispanic white men, IDU	4

MMS: male-to-male sexual contact; HET: heterosexual contact; IDU: injection drug use

68%

were linked to HIV care
within 30 days of diagnosis

91%

were linked
within 365 days

1,726 persons were living with diagnosed HIV

62%

were virally
suppressed

→ When HIV medication reduces the amount of HIV virus in a person's body to a low enough level (<200 c/mL), they are considered **virally suppressed** and will not transmit HIV through sexual contact.
